Total Fitness Team/Total Fitness.com

June 06, 2023

Key Stories and Acceptance Criteria(AC)

- [1.2] As a user I want to be able to login and create an account
 - (AC): When I am on the user login page, I don't want to be able to login if I haven't made an account.
- [1.4] As a user, I want to be able to enter nutritional information
 - (AC): When I add meals on the nutrition page, I want to be able to enter in the certain amount of calories, proteins or grams I am consuming, and visualize them on a pie chart.
- [2.5] As a user I want to be able to authorize my account when I register.
 - (AC): Considering that I am on the registration page, I shouldn't be able to sign up with the same email address.
- [3.1] As a user, I want to be able to create and keep track of workouts[5 point][7 hours]
 - (AC): When I set a certain workout on the workout page, I want to be able to see the specific workouts I completed not only on that day but from previous days.
- [3.2] As a user, I want to be able to enter a meal[5 Points][7 hours]
 - (AC): Considering that I am on the nutrition page, I should select any of the meals that pops up from the search bar, and I should automatically get the macro. Information and add it to the nutrition table.
- [4.1]As a User, I want to be able to see information regarding my meals for multiple days [1 points][3 hours]
 - (AC): Considering that I am on the nutrition page, I want to be able to see my nutrition information for those certain days but also the nutrition information of any previous day. This should be done easier with a calendar.
- [4.3]As a user, I want to see the days I worked out along with some info on the workout\s [5 points][9 hours]
 - (AC): Considering that I am on the calendar page, I want to be able to see the workouts I previously have done in the current month, and see the actual workout I have done.

Known Problems

- When a user attempts to register an existing user using the register tab no error message will be generated / nothing is given to indicate a user already exists
- There may be an issue with registering that causes the application to crash. However, this was only occurring on one of our systems, and remaking the bug is difficult.
- When querying the Meal API with a request for more items than are in the APIs database the website will crash and return a null error.

- Some hyperlinks on the Homepage don't work. For example, the contact buttons don't work, nor does the explore button go to any page.
- I "want to receive an email" doesn't work on the Registration page.
- The "forgot password" on the login page doesn't work.
- The "changeProfile button" on the userPage doesn't work. This button should have linked to the editProfile page.
- Remember me on the sign in page doesn't work.
- The scroll is very buggy throughout the app.
